Education

University of Waterloo — Waterloo, ON
Bachelor of Science, Mathematical Physics (Second year), Co-op — *Sep. 2025 – Present*

Relevant Skills

Business & Data: **Microsoft Excel**, **PowerPoint**, expense datasets, budget tracking, **data reporting**, dataset management, **project coordination**, **process improvement**
Automation & Technology: Python, Java, JavaScript, SQL, React, Node.js, Supabase, OpenCV, API integration
Digital Operations: **stakeholder outreach**, user acquisition, website content management, social media analytics, **digital communications**, Figma, Git, GitHub

Experience

Founder — 2026 – Present
Quadmates.ca — *Waterloo, ON*

- Founded and launched a student study-matching platform, acquiring approximately **50 early users** from concept through initial testing
- Planned and executed a digital user-acquisition campaign that generated **56 content view** and reached **38 accounts**
- Directed product strategy across 3 core workflows—authentication, student profiles, and study-partner matching—while coordinating development and launch
- Collected and analyzed user feedback to identify product gaps, prioritize improvements, and translate feedback into development decisions

Business & Finance Team Member — Jan. 2026 – Present
UW Orbital — *Waterloo, ON*

- Built and maintain an **Excel-based expense dataset** to centralize team spending, organize financial records, and support budget tracking
- Developing a **Python automation workflow** to streamline expense-data processing and reduce manual updates to financial records
- Collaborate within a **406-member multidisciplinary engineering organization** supporting satellite design and development
- Conducted **external stakeholder outreach** to a company of approximately 50 employees to pursue fabrication materials and engineering support for satellite development
- Supported business and finance operations for a team that tied for **1st place** in a satellite competition

Projects

Quadmates.ca Platform | *React, Node.js, Supabase, JavaScript* — 2026 – Present

- Built a full-stack digital platform supporting approximately 50 early users across 3 end-to-end user workflows
- Integrated frontend, backend, authentication, user profiles, persistent database storage, and study-partner matching functionality

Employee Records System | *Java, Swing* — 2025

- Developed a desktop information-management system supporting 5 employee data fields including ID, name, salary, and start date
- Implemented 3 record-management workflows—add, list, and remove—using Java objects, structured data storage, and input validation

Computer Vision Security Camera | *Python, OpenCV, Tkinter*

- Built a real-time computer vision application using OpenCV HOG/SVM detection to identify people from live camera input
- Implemented a multithreaded processing pipeline using a 5-frame queue and processed every 3rd frame to manage computational load
