NATHANIEL (NATE) POWELL

AI SYSTEMS / DATA TOOLING / PRODUCT ENGINEERING

n2powell@uwaterloo.ca | github.com/Tophacks | quadmates.ca
University of Waterloo | Co-operative undergraduate studies | 2025-present

PROFILE

Product-focused software engineer building real web applications, Python data workflows, and simulation experiments. Interested in AI infrastructure, robotics, researcher tools, and software that remains useful after deployment.

EXPERIENCE

Quadmates | Founder and Full-Stack Developer

2026-present

- Shipped a React and Supabase product with SQL-backed user data, authentication, messaging, and matching workflows.
- Built responsive interfaces, investigated backend reliability issues, and prepared a Capacitor-based iOS prototype.
- Used user feedback and real application testing to prioritize fixes and improve product workflows.

UW Orbital | Business and Technical Operations

2026-present

- Prototyped Python processing workflows for structured expense records and supported spreadsheet-based reporting.
- Communicated technical plans to manufacturing sponsors and negotiated support around delivery constraints.

INFOSYS INSTEP | Incoming Computer Engineering Intern - AI Agent Engineering

Jan-Apr 2027 | Bengaluru, India

- Selected for an upcoming internship with the Infosys CTO office, focused on AI agent engineering and enterprise workflows.
- Planned internship scope includes AI-assisted business-process automation; project deliverables will be updated after the role begins.

SELECTED PROJECTS

TransitOps / NeuroSim

Built Python simulation and reinforcement-learning control experiments, including evaluation of unsuccessful policies.

Tooling / deployment

Worked with Git, GitHub Actions, Vercel deployments, web APIs, and self-directed debugging.

TECHNICAL AND PROFESSIONAL SKILLS

Python, Java, JavaScript, SQL, React, Supabase, Vite, Git, GitHub Actions, REST APIs, data processing, simulation

Infosys is an incoming position; no internship deliverables are claimed as completed.
