NATHANIEL (NATE) POWELL

SOFTWARE ENGINEERING / FULL-STACK

n2powell@uwaterloo.ca | github.com/Tophacks | quadmates.ca
University of Waterloo | Co-operative undergraduate studies | 2025-present

PROFILE

Full-stack software developer and product founder building React applications, SQL-backed services, simulation tools, and automation. Incoming Infosys InStep computer engineering intern focused on AI agent engineering.

EXPERIENCE

Quadmates | Founder and Full-Stack Developer

2026-present

- Built and deployed a student networking application using React, JavaScript, SQL, and Supabase.
- Implemented and iterated on authentication, matching, user profiles, messaging, and mobile-friendly application flows.
- Adapted the web product for an iOS prototype with Capacitor and Vite and tested it in an Xcode simulator.

INFOSYS INSTEP | Incoming Computer Engineering Intern - AI Agent Engineering

Jan-Apr 2027 | Bengaluru, India

- Selected for an upcoming internship with the Infosys CTO office, focused on AI agent engineering and enterprise workflows.
- Planned internship scope includes AI-assisted business-process automation; project deliverables will be updated after the role begins.

UW Orbital | Engineering Operations / Finance

2026-present

- Prototyped Python automation for structured financial-data workflows and maintained Excel-based budget records.
- Worked with engineering stakeholders and external sponsors to align resource requests with technical plans.

SELECTED PROJECTS

NeuroSim / TransitOps
Reinforcement-learning rocket landing experiments and Python discrete-event transit simulation.

Computer vision
Built Python/OpenCV person-detection experiments with real-time processing.

TECHNICAL AND PROFESSIONAL SKILLS

Python, Java, JavaScript, SQL, React, Vite, Capacitor, Supabase, Git, REST/API integration, OpenCV, simulation

Infosys is an incoming position; no internship deliverables are claimed as completed.
